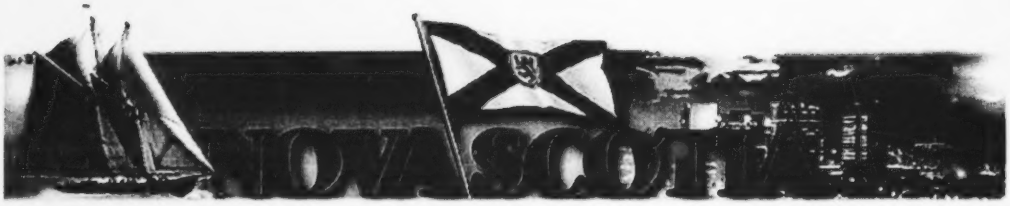
Nova Scotia Mortality Rates For Selected Causes

1995 to 2004



Prepared by

Information Analysis and Reporting Division
Information Management Branch
Nova Scotia Department of Health

This document contains a series of tables and graphs covering the most frequently requested mortality classifications over the period of 1995 to 2004. These tables and graphs are based on age-standardized mortality rates that give the best comparisons across different geographies and times. All Rates are calculated based on District Health Authority of residence, not District Health Authority of death. Nova Scotia residents dying outside the province are not included, nor are deaths of non-residents.

The underlying mortality information is based on the death registration and cause of death databases maintained by Nova Scotia Vital Statistics, Department of Health.

The population estimates used were the most current available from Statistics Canada as of March 2006.

Rates and Standardization

Introduction

Difference geographic areas or different time periods may not have similar population structures, *i.e.*, there may be different proportions of young and old people. This can lead to differences in the number of people dying per unit of time and per unit of population. A crude, or unadjusted, rate is calculated by taking the number of deaths in a geographic area in a period of time and dividing by the population (usually taken at the midpoint of the time period) in that geographic area, *eg.*:

$$Deaths / Population$$

To avoid decimals, it is customary to express this as a rate per 100,000 persons:

$$Deaths / Population \times 100{,}000$$

An additional step can be taken to adjust these rates to correct for population differences through a process called standardization.

Process to Standardize Rates:

- A crude rate for each specific age (and sex[1]) cohort (for example women aged 15 to 19) is divided by the population estimate for the same cohort.
- These crude rates are multiplied by a weight (calculated by dividing the 1991 Canadian population in the specific cohort by the total 1991 population).
- The weighted rates are then added together across all age (and sex) cohorts to produce an age (and sex) standardized mortality rate.

The process of standardizing removes the effects of age (and/or sex) in a population. The resulting age (and sex) standardized rate provides a fairer comparison between geographic areas and different time periods than the crude rate.

---

[1] Rates are generally only adjusted for age, but can be adjusted for sex differences as well. For conditions that only apply to one sex (for example, cancer of the cervix) standardization is done within only the population of that sex.

Potential Years of Life Lost

Technical Notes

Potential years of life lost (PYLL) is the number of years lost when a person prematurely dies from any cause (before age 75). PYLL is calculated by taking the median of each age group and subtracting from 75 and then multiplying by the number of deaths in that age group.

(75 - (Median of age group)) x (# deaths in age group) = PYLL

The standardized rate of PYLL per 100,000 population is the calculated PYLL divided by the population, of the given area, under 75 years of age. The standardized rate shows the PYLL for the average person under the age of 75, of people with a given condition, in a given area. A zero simply means that for the given time period there were no deaths attributed to the condition for anyone under the age of 75.

(PYLL / population) x 100,000

Selected Categories from

Table C. Comparable category numbers for 113 selected causes of death according ICD-9 and ICD-10

List Numbers	Cause of Death	ICD-10	ICD-9
016	Human immunodeficiency virus (HIV) disease	B20-B24	042-044
019	Malignant neoplasms	C00-C97	140-208
021	Malignant neoplasms of esophagus	C15	150
022	Malignant neoplasms of stomach	C16	151
023	Malignant neoplasms of colon, rectum and anus	C18-C21	153-154
024	Malignant neoplasms of liver and intrahepatic bile ducts	C22	155
025	Malignant neoplasms of pancreas	C25	157
027	Malignant neoplasms of trachea, bronchus and lung	C33-C34	162
029	Malignant neoplasms of breast	C50	174-175
030	Malignant neoplasms of cervix uteri	C53	180
032	Malignant neoplasms of ovary	C56	183.0
033	Malignant neoplasms of prostate	C61	185
046	Diabetes mellitus	E10-E14	250
053	Major cardiovascular diseases	I00-I78	390-434, 436-448
054	Diseases of heart	I00-I09, I11, I13, I20-I51	390-398, 402, 404, 410-429
058	Ischemic heart diseases	I20-I25	410-414, 429.2
070	Cerebrovascular diseases	I60-I69	430-434, 436-438
071	Atherosclerosis	I70	440
076	Influenza and pneumonia	J10-J18	480-487
079	Other acute lower respiratory infections	J20-J22	466
082	Chronic respiratory diseases	J40-J47	490-494, 496
083	Bronchitis, chronic and unspecified	J40-J42	490-491
084	Emphysema	J43	492
085	Asthma	J45-J46	493
086	Other chronic lower respiratory diseases	J44-J47	494, 496
087	Pneumoconiosis and chemical effects	J60-J66, J68	500-506
088	Pneumonitis due to solids and liquids	J69	507
089	Other diseases of respiratory system	J00-J06, J30-J39, J67, J70-J98	034.0, 460-465, 470-478, 495,508-519
093	Chronic Liver disease and cirrhosis	K70, K73-K74	571
108	Certain conditions originating in the perinatal period	P00-P96	760-771.2,771.4-779
109	Congenital, malformations, deformations and chromosomal abnormalitie	Q00-Q99	740-759
112	Accidents (unintentional injuries)	V01-X59, Y85-Y86	E800-E869, E880-E929
114	Motor vehicle accidents	V02-V04, V09.0, V09.2, V12-V14, V19.0-V19.2, V19.4-V19.6, V20-V79, V80.3-V80.5, V81.0-V81.1, V82.0-V82.1, V83-V86, V87.0-V87.8, V88.0-V88.8, V89.0, V89.2	E810 - E825
124	Intentional self-harm (suicide)	X60-X84, Y87.0	E950-E959
127	Assault (homicide)	X85-Y09, Y87.1	E960-E969

Prepared from National Vital Statistics Report, Vol 49, No. 2, May 18, 2001

Selected Categories from

Table C. Comparable category numbers for 113 selected causes of death according ICD-9 and ICD-10

List Numbers	Cause of Death	ICD-10	ICD-9
130	Legal Intervention	Y35, Y89.0	E970-E978
131	Events of undetermined intent	Y10-Y34, Y87.2, Y89.9	E980-E989
134	Operations of war and their sequelae	Y36, Y89.1	E990-E999
135	Complications of medical and surgical care	Y40-Y84, Y88	E870-E879, E930-E949

Additional Categories Calculated for Tables and Graphs

All other Heart Disease (Non-IHD) is a calculation of Diseases of Heart minus Ischemic Heart Disease
All other Respiratory Diseases is a calculation of All Respiratory Diseases minus Asthma, Bronchitis, Emphysema, Influenza and Pneumonia
All Accidents and Adverse Effects is a calculation of Unintentional Injuries (includes Motor Vehicle Accidents), Homicide, Complications of Medical and Surgical Care, Events of Undetermined Intent, Legal Intervention, Suicide, Operations of War and Their Sequelae
